Address:
Otbianwa Phase 2, Ibeju-Lekki, Lagos, Nigeria., Lagos (NG)

Skills

Angular

React

Typescript

Nodejs

Tailwind CSS

Languages

English

Professional Summary

I am a Full-Stack Software Engineer driven by a simple philosophy: Leave the codebase cleaner than I found it. I specialize in bridging the gap between complex backend logic and seamless, high-performance user experiences.

With a deep foundation in Angular and sharp expertise in React, I build scalable web applications that are architected to last. My approach is rooted in the belief that clean code and great UI/UX is inseparable. Whether I'm refactoring navigation logic for a minimalist design or building fast, modular interfaces with TypeScript and Tailwind CSS, my focus remains on performance, accessibility, and maintainable architecture.

Beyond the frontend, I thrive in the full development lifecycle—from designing RESTful APIs with Node.js/Express to spearheading infrastructure migrations from serverless platforms to VPS hosting. I don’t just consume data; I ensure the entire system—from the database to the deployment pipeline—is built for stability and impact.

Experience

Full-Stack Software Engineering, Tresbontech LTD. Lagos, Lagos
Feb. 2026 – Present

Full-Stack Softwar Engineeer(Intern) Tresbontech LTD | Lagos, Nigeria | March 2026 – Present * React Website Development: Architecting and deploying responsive, high-performance websites using React.js. This includes refactoring the Tresbontech site header and navigation logic for a cleaner, more intuitive UI/UX.

- Full-Stack Integration: Building and maintaining the bridge between React frontends and Node.js/Express backends, ensuring seamless data flow and efficient API consumption.
- Mobile App Development: Leveraging React Native to develop cross-platform mobile features, maintaining brand and functional consistency across web and mobile platforms.
- Infrastructure & DevOps: Spearheading the strategic migration of web projects from Vercel to a consolidated Hosting VPS, handling server configuration and deployment pipelines.
- Database Management: Overseeing relational and NoSQL database operations, focusing on security, query optimization, and implementing robust backup protocols.
- Direct software programming and development of documentation.

Education

National Institute of Information Technology (NIIT), Lagos, Lagos
High School Diploma, Software Engineering, Present
